☐ 1 Necessity of COVID-19 Vaccination in Persons Who Have Already Had COVID-19

[N. K. Shrestha; P. C. Burke; \(...\); S. M. Gordon](#)
Apr 01 2022 | medRxiv | Total Versions: 1

Background. The purpose of this study was to evaluate the necessity of COVID-19 vaccination in persons with prior COVID-19. Methods. Employees of Cleveland Clinic working in Ohio on Dec 16, 2020, the day COVID-19 vaccination was started, were included. Anyone who tested positive for COVID-19 at least once before the study start date was considered previously infected ... [Show more](#)

摘要 Etomidate is an anesthetic agent used in septic patients. The response of high-mobility group box 1 (HMGB1) and the underlying mechanism of HMGB1 in the nuclear factor kappa B (NF-κB) pathway in a rat model of sepsis have not been reported. The HMGB1 and the underlying mechanism of HMGB1 in the NF-κB pathway in a rat model of sepsis were measured 6 and 24 hours after

The screenshot displays the Web of Science interface for a researcher's profile. The header includes the Clarivate logo and navigation options like 'Web of Science' and 'Research Assistant'. The profile for Kwon Hui Seo is shown, including their affiliation with Seoul St. Mary's Hospital and The Catholic University of Korea. A list of 12 publications is displayed, with the first article titled 'Target-controlled infusion of remimazolam effect-site concentration for total intravenous anesthesia in patients undergoing minimal invasive surgeries'. On the right, a '計量' (Metrics) section provides various statistics: 12 total documents, 12 Web of Science indexed publications, 0 preprints, 0 preprint articles, 0 non-indexed publications, 2 peer-reviewed articles, 0 editorial board records, 0 research grants, 4 H-index, 12 indexed publications, 62 total citations, 62 cited references, 60 total citations excluding self-citations, 60 cited references excluding self-citations, 0 patent citations, 0 patent references, 0 government citations, and 0 government references. A sidebar on the left contains navigation icons, and a bottom bar shows the current page (1) of 1.

Abstract

The Hubble Deep Field (HDF) is a Director's Discretionary program on HST in Cycle 5 to image an undistinguished field at high Galactic latitude in four passbands as deeply as reasonably possible. These images provide the most detailed view to date of distant field galaxies and are likely to be important for a wide range of studies in galaxy evolution and cosmology. In order to optimize observing in the time available, a field in the northern continuous viewing zone was selected and images were taken for ten consecutive days, or approximately 150 orbits. Journal Impact Factor ⓘ

The Journal Impact Factor (JIF) is a journal-level metric calculated from data indexed in the Web of Science Core Collection. It should be used with careful attention to the many factors that influence citation rates, such as the volume of publication and citations characteristics of the subject area and type of journal. The Journal Impact Factor can complement expert opinion and informed peer review. In the case of academic evaluation for tenure, it is inappropriate to use a journal-level metric as a proxy measure for individual researchers, institutions, or articles. [Learn more](#)

3.06

The Journal Citation Indicator (JCI) is the average Category Normalized Citation Impact (CNCI) of citable items (articles & reviews) published by a journal over a recent three year period. The average JCI in a category is 1. Journals with a JCI of 1.5 have 50% more citation impact than the average in that category. It may be used alongside other metrics to help you evaluate journals. Total Citations

10,376

The total number of times that a journal has been cited by all journals included in the database in the JCR year. Citations to journals listed in JCR are compiled annually from the JCR years combined database, regardless of which JCR edition lists the journal.

View all years

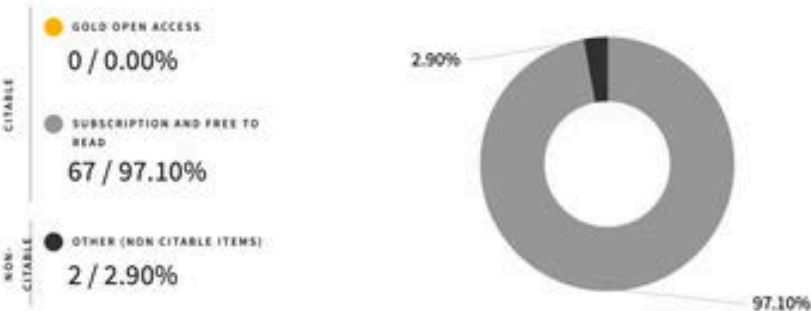

Open Access (OA)

The data included in this tile summarizes the items published in the journal in the JCR data year and in the previous two years. This three-year set of published items is used to provide descriptive analysis of the content and community of the journal.

Citation distribution

The Citation Distribution shows the frequency with which items published in the year or two years prior were cited in the JCR data year (i.e., the component of the calculation of the JIF). The graph has similar functionality as the JIF Trend graph, including hover-over data descriptions for each data point, and an interactive legend where each data element's legend can be used as a toggle. You can view Articles, Reviews, or Non-Citable (other) items to the JIF numerator.

The screenshot shows the Journal Citation Reports website interface. The top navigation bar includes the Clarivate logo, the site name 'Journal Citation Reports™', and links for Journals, Categories, Publishers, Countries/Regions, Compare, My favorites, Sign In, and Register. The main content area features a large purple banner with the text 'The world's leading journals and publisher-neutral data' and a search bar. Below the banner, there is a section for 'Already have a manuscript?' with a 'Match my manuscript' button. At the bottom, there are four icons representing Journals, Categories, Publishers, and Countries/Regions. On the right side, a registration form is overlaid, titled 'Register to continue with Journal Citation Reports'. The form includes fields for Email address, Password, Re-enter password, First Name, Last Name, a CAPTCHA (548KK), and a Register button. Annotations include a red arrow pointing to the 'Sign In' button with the text '登入' (Login) and a green arrow pointing to the 'Register' button with the text '註冊' (Register).

JCR小總結

總結

JCR的全面期刊分析

有效率地查看各領域的期刊數據

透過每年分析的期刊報告獲取出版資訊

全方位功能助您分析期刊表現

JIF與JCI兩個影響力指標清楚明瞭

視覺化趨勢報告

有助決定投稿意向

找出合適的期刊發表研究成果

總結

JCR的影響力指標

JIF (Journal Impact Factor)

期刊前兩年發表的文章平均被引用的次數

JIF Quartile & Percentile

JIFQ: 學科內的四分位 (Q1 - Q4)

JIF Percentile: 表現排名百分位

JCI (Journal Citation Indicators)

期刊三年正規化平均影響力 (CNCI)

總結

JIF與JCI的比較

JIF (Journal Impact Factor)

- 用途：評估期刊的**總體被引影響力**
- 適用場景：同學科比較、熱門核心期刊、歷史悠久的成熟期刊

JCI (Journal Citation Indicator)

- 用途：評估期刊在所屬學科中的**相對表現**
- 適用場景：跨學科比較、新興或小眾期刊、引用密度差異明顯領域

狀況	JIF 高 但 JCI 低	JIF 低 但 JCI 高
 代表情境	高引用量但學科內表現一般	引用不多但學科內表現優異
 可能原因	學科引用密度高 靠熱門單篇拉高 跨學科被放在強領域 Review article的比例較高	新創刊或文章少 學科整體引用低 平均品質穩定
 投稿建議	• 再確認文章質量是否一致	• 適合探索具潛力的新興期刊 • 為跨領域研究找到切入點
